

ABSTRACT OF THE DISCLOSURE

A trampoline safety fence includes a protective net supported on a plurality of posts to enclose a space
5 above a jumping bed of the trampoline. A gate is formed at a joint or an overlapped portion of two sewed ends of the protective net, and user-controllable and selectively openable fastening elements are provided on the protective net at the joint or within the
10 overlapped portion corresponding to the two sewed ends to ensure safe closure of the gate of the trampoline safety fence. And, the selectively openable fastening elements may be magic tapes or zippers.
